BioStreme

Waste Water Treatment

BIOSTREME™ 201 PROVIDES A COST-EFFECTIVE means to manage odours and reduce BOD and COD levels, suspended solids, and sludge in Leachate Lagoons and Holding Tanks. This concentrated micronutrient formulation manages the basic biological processes in these applications –supporting effective populations of naturally-occurring, facultative bacteria that aid in rapid decomposition of biological waste without production of odourous by-products.

Application Areas

- Municipal Wastewater
- Caravan Paks
- Landfill Leachate
- Pulp & Paper
- Abattoirs
- Rendering Plants
- Food Processing Plants
- Livestock Farms
- Zoos.

Benefits

- Controls Noxious Odours
- Effective & Long Lasting
- Enhances Microbial Activity
- Natural & Biodegradable
- Safe & Non Toxic

Works with nature – not against it!

Dosage:

Typical applications involve introducing *BioStreme™ 201* to wastewater applications in 5-50 ppm range based on organic loading. The product is best applied where it can be completely mixed with wastewater. This can be accomplished by introducing BioStreme™ 201 at the influent flow source pipe or channel, or by topical application and mixing by mechanical agitation. Retention time in storage basin or lagoon applications should be 1-3 days for the best results.

Note: Wastewater characteristics vary greatly depending on facility processes. Please contact an EnviroPro Alternatives Sales Representative for specific dosage requirements for your site, or to arrange laboratory testing of wastewater samples taken from your facility.
